

Interview Coding Codebook

Validation linking scheme

Every coded segment carries exactly one primary link describing its relation to the framework element addressed. Combined forms (e.g. C/R) occur where one segment both supports and qualifies an element.

Valence	Definition
Confirms (C)	Supports the framework element as formulated.
Refines (R)	Supports the element but qualifies its scope, mechanism, or formulation.
Extends (E)	Adds something the framework omits, a new mechanism, condition, or concern.
Challenges (X)	Contradicts the element or questions its attainability.
Context (Ctx)	Background needed for interpretation; carries no validation weight.

Valences with qualifiers:

Qualifier	Meaning
(n)	By negative case: the element's absence produced the predicted dysfunction
(w)	Weak: bare assent without elaboration
(i)	Indirect: the point was coded under a closely related code rather than this element's own code.
(a)	Aspirational: endorsed as a target picture, not as current practice.
(d)	Divergence: the position conflicts with another informant's on the same element.

Deductive codes (framework-derived)

Applications notation: informant label followed by the segment numbers in that informant's report, e.g. 'E1-3, 15 ; E3-5'. n = total applications across the corpus. Informants: E1-E6.

Code	Label	Definition / anchor	Applications	n
Section 1 - Organizing principle: governed autonomy				

Code	Label	Definition / anchor	Applications	n
GA-SUB	Substantive domain authority (§1)	Domain actors hold genuine, not nominal, decision authority over data within their defined scope.	E2-2, 4, 14, 21 ; E4-5 ; E5-3, 7, 14	8
GA-AUT	Authoritative centre (§1)	The central authority is authoritative within its meta-governance scope, not merely advisory.	E1-15 ; E2-10, 21 ; E4-9 ; E6-22	5
GA-PRO	Progressive instantiation (§1)	Domains move through governance states asynchronously; the framework does not require synchrony.	E1-9 ; E3-2 ; E2-13 ; E4-10 ; E6-9	5
GA-REC	Recursive autonomy (§1)	The central data authority is itself an autonomous actor whose authority is partially constituted by adjacent compliance structures.	E1-7, 20	2
Section 2 - Central meta-governance functions				
CF-SS	Standard setting (§2)	Define enterprise-wide policies, principles, definitions and interoperability requirements; render policy machine-readable where possible.	E1-3, 15 ; E3-5 ; E2-3, 5 ; E4-10 ; E5-1, 2 ; E6-2	9
CF-BM	Boundary maintenance (§2)	Define and adjust domain authority scopes; resolve overlaps; recognize, consolidate or divide domains in response to organizational change.	E1-4, 5, 29 ; E3-9, 19 ; E2-5 ; E4-13 ; E5-8 ; E6-21	9
CF-CA	Conflict arbitration (§2)	Pre-specified process to arbitrate disputes between domains and between domains and the center.	E1-6 ; E4-15	2
CF-CM	Compliance monitoring (§2)	Monitor whether domain-level governance meets organizational requirements; detect non-compliance through KPIs rather than ad hoc audits.	E1-7 ; E2-4, 5	3
CF-PT	Platform & tooling stewardship (§2)	Provide and maintain the central platform, catalogue, lineage tools, quality monitoring and marketplace; make policy enforceable through the platform.	E1-8 ; E3-3 ; E4-4, 17 ; E5-2 ; E6-5, 6, 20	8
CF-CC	Coordination & connection (§2)	Act as connector between domains, between business and technology, and between operational stewards and senior accountable owners.	E1-10 ; E2-6 ; E4-5, 7	4
CF-SM	Stakeholder mandate maintenance (§2)	Secure and maintain C-level sponsorship; manage expectations; design incentives; deploy a persuasion repertoire; recruit pipeline candidates.	E1-11, 12, 14, 19 ; E3-10 ; E2-2, 6, 9, 10 ; E4-2, 3 ; E5-10, 11 ; E6-3, 8, 11, 12, 22	18
CF-CT	Capability transfer (§2, transition tier)	Place central staff or recruit people into domains; run mandatory onboarding training; verify sustained activity; taper as domains absorb capability.	E1-16, 17 ; E2-9 ; E5-11 ; E6-2, 4, 10	7
CF-AA	Adjacent-authority coordination (§2, transition tier; residual thereafter)	Establish and maintain working relationships with risk, privacy, legal, security and information management; route shared decisions through their processes.	E1-7, 20 ; E5-12, 17 ; E6-18	5
Section 3 - Domain governance authority				

Code	Label	Definition / anchor	Applications	n
DS	Domain decision scope (§3.1)	Allocation of decisions across delegated, reserved/co-decided-with-center, and co-decided-with-adjacent-authority patterns.	E1-5 ; E3-2, 9 ; E2-14, 21 ; E4-5, 18	7
RA-OWN	Domain data owner (§3.2)	Accountable for the domain's data assets; signs off classification, ownership and access; may be split into strategic and operational owner.	E1-21 ; E3-8, 15 ; E2-16, 18 ; E5-3, 4	7
RA-BDS	Business data steward (§3.2)	Operational responsibility for definitions, quality rules and business meaning within the domain.	E3-15 ; E2-17 ; E5-3	3
RA-TDS	Technical data steward (§3.2)	Translates business definitions and quality rules into technical implementation; frequently the most undersupplied role; must be explicitly resourced.	E1-22, 23 ; E3-16 ; E2-15, 16, 17 ; E5-4, 5, 15, 16	10
AC	Autonomy conditions (§3.3)	Six simultaneous conditions: roles + delegates filled; trained and verifiably active owner; CDEs with quality rules in production; demonstrable lineage; defined and used escalation path; accepted domain KPI.	E1-13, 18, 24, 25, 32 ; E2-18, 19, 20 ; E4-15 ; E5-15	10
Section 4 - Governance interfaces				
GI-AB	Authority boundaries (§4)	A documented register specifying which decisions belong to the center, the domain, are co-decided, or sit with adjacent authorities.	E1-27, 29 ; E3-4, 20 ; E4-8	5
GI-EP	Escalation paths (§4)	Three-tier vertical path (operational / domain-lead / executive) plus horizontal routes to adjacent authorities.	E1-6, 28, 29 ; E3-8 ; E2-22, 23, 24 ; E4-15, 19 ; E5-6 ; E6-23, 24	12
GI-AC	Accountability channels (§4)	Scheduled, bidirectional flows: monthly KPI dashboard; per-domain sessions proportional to maturity; comms channel with implementation support; pipeline channel; executive reporting.	E1-13, 14 ; E3-7 ; E2-7, 8 ; E4-16, 21 ; E5-6 ; E6-23	9
GI-CI	Coordination interfaces (§4)	Mechanisms for shared authority, most importantly cross-domain working groups convened around a data flow rather than a domain.	E1-28 ; E2-8, 23 ; E4-19 ; E5-13 ; E6-24	6
GI-MA	Marketplace approval-flow design (§4)	Gates (minimum two in federated steady state), gate composition, and a documented removal pathway for every transitional gate.	E1-9 ; E4-7, 11, 15 ; E5-14 ; E6-24	6
Section 5 - Transition architecture				
TA-PH	Transition phases (§5.1)	Centralized phase, hybrid phase (expected longest), federated steady state with a reduced seven-function center.	E1-2, 18 ; E2-3, 12, 13, 25 ; E6-2, 4, 13, 14	10
TA-PC	Preconditions for delegation (§5.2)	Executive mandate with budget and enforceable KPI; platform availability (catalogue, quality, lineage, marketplace); adjacent-authority alignment.	E1-2, 12, 25, 32 ; E3-5, 10, 14 ; E2-24 ; E4-3 ; E6-5, 10, 12	12
TA-SEQ	Domain sequencing logic (§5.3)	Regulatory criticality, then CDE density, then owner readiness/willingness, with governance ahead of technical integration.	E1-31 ; E3-12 ; E2-26 ; E5-8, 9 ; E6-15	6

Code	Label	Definition / anchor	Applications	n
TA-ONB	Onboarding disambiguation (§5.4)	Technical onboarding (data in platform) versus governance onboarding (roles, training, sustained activity) with distinct owners and success criteria.	E1-16	1
TA-HYB	Governing the hybrid state (§5.5)	Asymmetric central effort by maturity; visible KPI tree including the center's own KPIs; non-punitive reversibility; frequent communication.	E1-9, 13, 26 ; E6-13, 16, 23	6
Section 6 - Adjacent authorities				
AA-PAT	Adjacent-authority decision-rights patterns (§6)	Adjacent-leads / co-decision / central-leads patterns; countermeasures against inward and outward function creep.	E5-12 ; E6-18	2
Section 7 - Anti-patterns				
AP-MF	Anti-pattern: mandate failure (§7)	Central authority is structurally peer-level, has no enforceable KPI, and depends on persuasion alone.	E1-12, 13, 15 ; E6-22	4
AP-MTS	Anti-pattern: missing technical stewardship (§7)	Business stewards are assigned; technical stewards are left implicit.	E1-22 ; E2-15 ; E5-15	3
AP-RG	Anti-pattern: reactive governance (§7)	The center only acts when a consumer requests data; no proactive identification of critical data elements.	E4-2, 6	2
AP-OWC	Anti-pattern: one-way communication (§7)	The center broadcasts policy and receives no signal back.	E6-3	1
AP-DDI	Anti-pattern: domain definition by inertia (§7)	Domain boundaries follow inherited org-chart structure rather than data flows.	- (defined, not applied)	0
AP-GEN	Anti-patterns: general recognition (§7)	Interviewee-level recognition or endorsement of the anti-pattern catalogue as a whole.	E1-30 ; E3-18 ; E4-22	3

Emergent codes (inductive)

Added during coding where interviewees raised material outside the framework.

Code	Label	Definition	Applications	n
E-CAP	Capacity constraints (emergent)	Workforce scarcity and role stacking as binding constraints on governance designs.	E5-7, 11 ; E6-18, 19	4
E-CONS	Data consumer / analyst role (emergent)	The consumption-side role (data analyst / user representative) absent from the framework's role architecture.	E3-17	1

Code	Label	Definition	Applications	n
E-CUL	Cultural & industry moderation (emergent)	National, industry and organizational culture moderate the governance approach and the persuasion burden.	E1-11 ; E3-13 ; E6-17	3
E-DOMSEG	Domain segmentation method (emergent)	Procedures for decomposing an organization into domains: by data object layer, application, organizational unit, country, or KPI ownership/consumption.	E3-2, 9, 19, 20 ; E4-13 ; E5-8	6
E-FLOW	Interface flow visualisation (emergent)	Scenario flows (change request, issue handling) and explicit sender/receiver specification across the five interfaces.	E3-6, 18	2
E-GBC	Governance by design / policy-as-code (emergent)	Computational governance: controls embedded in the platform, pipelines and processes rather than enforced by after-the-fact review.	E4-17 ; E6-5, 6, 10, 19, 20	6
E-INC	Incentive design (emergent)	How domain role-holders should be incentivized: remuneration-linked versus recognition-based rewards.	E1-19 ; E2-11	2
E-KPI	KPI-driven transition (emergent)	Anchoring transition and data-product definition on a small set of decision-relevant business KPIs.	E4-12, 14, 20, 21	4
E-LIFE	Lifecycle presentation (emergent)	Presenting the framework in phases (design / implementation / monitoring) and role-filtered views for usability.	E2-27	1
E-METAGOV	Meta-governance / change sensing (emergent)	A standing process by which the center detects process, system and project changes that alter the data governance scope; seats in design authority / portfolio boards.	E6-21	1
E-MVP	MVP / adaptive governance (emergent)	Minimal-viable governance calibrated to organizational stage and maturity; legal floor first; no big bang.	E6-9, 10	2
E-POS	Central-team positioning (emergent)	Hierarchical placement, visibility and reporting line of the central team as a determinant of usable mandate.	E6-22	1
E-RACI	Negotiated RACI allocation (emergent)	Workshop-based, activity-level allocation of responsible/accountable/consulted/informed roles, facilitated by the center.	E4-8, 9, 16	3
E-SPC	Sponsor continuity (emergent)	Turnover risk of the executive sponsor as a threat to program continuity.	E3-11	1
E-TERM	Terminology alignment (emergent)	Mapping framework roles to established vocabulary (DAMA: data custodian, data sponsor) to aid adoption.	E3-16 ; E5-4, 5	3
E-TSP	Technical-steward placement (emergent)	Trade-off between a central pool of technical stewards (scarce expertise, platform complexity) and decentral placement (ownership, maintainability).	E1-23 ; E5-16	2
E-VLOCK	Vendor lock-in & data autonomy (emergent)	Egress costs, service-model commercial dynamics and sovereignty over one's own data as governance concerns.	E6-7	1

Usage overview

Report / informant	Coded segments	Code applications	Distinct codes
E1 (Coding_Interview_E1)	32	59	32
E2 (Coding_Interview_E2)	27	46	23
E3 (Coding_Interview_E3)	20	32	21
E4 (Coding_Interview_E4)	22	39	23
E5 (Coding_Interview_E5)	17	35	22
E6 (Coding_Interview_E6)	24	49	26

Totals: 52 codes (35 deductive, 17 emergent), 142 coded segments, 260 code applications. Most-applied codes: CF-SM (18), GI-EP (12), TA-PC (12), RA-TDS (10), AC (10), TA-PH (10).

Codes with a single application (8): TA-ONB, AP-OWC, E-CONS, E-LIFE, E-METAGOV, E-POS, E-SPC, E-VLOCK. Codes applied by more than one segment but only one informant (6): GA-REC, AP-RG, E-FLOW, E-KPI, E-MVP, E-RACI.
