

Design-Phase Traceability: How the Design Interviews Shaped the Framework

Mapping of every component voiced in the three design-phase interviews (D1, D2, D3) to its disposition in the condensed framework, carried, partially carried, or left aside.

Purpose and scope

This document answers two questions about the design phase: (1) how the three design interviews shaped the framework, told element by element; and (2) for every component an interviewee voiced, whether it was carried into the framework or left aside.

Method and epistemic status

Component extraction. A component is a distinct design-relevant construct, practice, problem, or proposal voiced by the interviewee. The three transcripts yielded 92 components (D1: 31, D2: 31, D3: 30). Interviewer prompts were used for context but never counted as interviewee components.

Disposition categories. Carried - direct: the framework contains the component substantially as voiced, sometimes with matching wording. Carried - generalized: the component was abstracted or transformed into a framework element. Partially carried: identifiable parts were taken, others left. Not carried: the component has no counterpart in the framework. Context: the component shaped understanding or motivation but is not itself a design element.

Interview panel

ID	Role & vantage	Organisation context
D1	Consultant in data management	Consultant assisting large organizations in governance practices
D2	Data governance & quality consultant	Organization currently in transition, with domains identified and onboarding taking place
D3	Data governance lead	Organization currently in transition, with domains identified and onboarding taking place

Component disposition tables

D1 - data management consultant (31 components)

ID	Component as voiced	Framework destination	Disposition	Notes
D1-1	Large banks adopt federated governance because of size and domain heterogeneity (a 'client' differs across mortgage and risk)	Sec. 1 rationale	Carried - generalised	Motivating logic for governed autonomy.
D1-2	Two ways to handle divergent shared definitions: force agreement in a room, or facilitate coexistence with mutual awareness	Sec. 3.1 reserved cross-domain definitions; Sec. 2 conflict arbitration; Sec. 4 coordination	Carried - generalised	The framework reserves shared-entity definitions to the center while providing arbitration and coordination for the rest.
D1-3	Target model: a lean central team with literate, capable business domains that do a lot themselves	Sec. 1 governed autonomy; Sec. 5.1 federated state	Carried - direct	Essentially the framework's steady-state picture.
D1-4	Data mesh is a loosely interpreted buzzword, not a full governance framework	-	Context	Motivates the gap; not a component.
D1-5	Data-management capability is historically stronger centrally than in domains; governance was an extra task for analysts	Sec. 2 capability transfer; Sec. 3.3 literacy	Carried - generalised	The capability asymmetry is what capability transfer exists to correct.
D1-6	Central must standardize: how to document lineage, write data quality rules, identify critical data	Sec. 2 standard setting	Carried - direct	Reads as an inventory of the standard-setting scope.
D1-7	Provide tooling (catalogues) so domains can see each other's interpretations and ownership	Sec. 2 platform & tooling; coordination & connection	Carried - direct	'Cross-domain visibility through catalogues and marketplaces' matches this rationale.
D1-8	No authoritative framework exists; central teams follow the existing business structure, which is political	Sec. 7 domain definition by inertia	Carried - direct	The inertia anti-pattern names exactly this habit.
D1-9	Policy reception depends on the central team's perceived strength and leadership network; policy dumped on SharePoint dies	Sec. 2 stakeholder mandate maintenance	Carried - generalised	Perceived-strength and network-building are inside the mandate function; the SharePoint failure is a mandate-failure pattern.
D1-10	Enforce through systems, not paper: forcing stuff in systems guarantees execution as envisioned	Sec. 2 standard setting (machine-readable policy); platform stewardship (policy enforceable through the platform)	Carried - direct	Aligns with the literature on data governance.
D1-11	Business wants flexibility, center wants standardization; the clash is natural	Sec. 1 framing	Context	Background tension the principle manages.
D1-12	Assign ownership fast and granularly ('if you create something, it's yours'), down to a column, so accountability can be traced through process steps	Sec. 3.1 granularity; Sec. 3.3 lineage; Sec. 4 authority register	Partially carried	Granular assignment and traceability are carried; the producer-owns rule is to be considered by the application organization.
D1-13	Show value fast: platform access as the carrot for domains to accept governance work	Sec. 2 stakeholder mandate (incentives: resource access)	Carried - direct	Resource access is a named incentive class.
D1-14	KPI tree on data-management/policy-house compliance rolled up to business domain leads, reasoned from the consumer's perspective	Sec. 5.5 visible KPI tree; Sec. 3.3 domain KPI condition	Carried - direct	Accountability for both domain and the center. Focusing on the consumer differs per organization.

ID	Component as voiced	Framework destination	Disposition	Notes
D1-15	Compliance linked to money: bonuses and resources for compliant domains	Sec. 2 incentives	Partially carried	Ways to incentivize the domain teams for data governance practices.
D1-16	'Centralize where you have to, decentralize where you can'; the central team is always a bottleneck	Sec. 1 governed autonomy	Carried - generalised	This is the principle's practical formulation.
D1-17	Regulation drives maturity: banks must show lineage and quality (mortgage decisions); unregulated sectors simply do not do it	Sec. 5.3 criterion 1 (regulatory criticality)	Carried - direct	Domain sequencing criterion.
D1-18	Without capability and platform maturity, federating fails ('you're basically screwed'; the empty Snowflake environment)	Sec. 5.2 preconditions; Sec. 7 fragmentation	Carried - direct	The fragmentation anti-pattern ('autonomy without capability or platform support') matches.
D1-19	Data products shared in marketplaces under publication guidelines (gold-product criteria; medallion architecture)	Sec. 4 marketplace approval-flow design	Partially carried	The medallion naming is left aside as vendor-pattern specificity.
D1-20	Central laziness pitfall: 'data mesh is used as an excuse' to stop prescribing rules or getting involved	Sec. 7 excused absence	Carried - direct	Aligns with the literature on common pitfalls.
D1-21	If C-level cannot trust reports or year-end books, the whole foundation is questioned	Sec. 2 compliance monitoring rationale; Sec. 4 executive tier	Carried - generalised	Supplies the executive stake that justifies monitoring and the top escalation tier.
D1-22	Define domains consumer/data-flow-driven: cluster the people around models or products sharing data, across systems	Sec. 4 coordination interfaces (cross-domain working groups convened around a data flow)	Partially carried	Carried as a coordination mechanism, not as a domain-definition method.
D1-23	Sustainability/CSRD attempted as a new cross-cutting domain (failed politically); sustainability reporting as a governance stress test	-	Not carried	Illustrative case; the flow-based grouping insight was carried via D1-22 instead.
D1-24	Escalation layers: data quality board (stewards, operational) top-level data governance board with C/C-1 and a CDO holding a data-quality KPI and mandate	Sec. 4 escalation paths (three tiers)	Carried - direct	Tier names and composition, including 'Data Quality Board', map one-to-one.
D1-25	Mature bank: KPI structure plus governance layers; visibly improving regulator conversations	Sec. 5 evidence base	Context	Reference case underpinning the transition architecture's plausibility.
D1-26	Producer-side bulk cleanup versus consumer-driven check-before-use as a balance	-	Not carried	-
D1-27	Sequence by criticality: define critical data, count its concentration per domain, start where the count is highest	Sec. 5.3 criterion 2 (CDE density)	Carried - direct	The 'simple count' is criterion 2.
D1-28	Central teams place people in domains for six to twelve months to learn the business and seed data-driven working	Sec. 2 capability transfer	Carried - direct	'Place central staff or recruit people into domains'.
D1-29	Domain readiness judged through KPIs against well-defined policies, with thresholds; pilot demonstrations of lineage and quality on a report	Sec. 3.3 conditions (demonstrable lineage; KPI acceptance)	Carried - generalised	Demonstrability language survives; thresholds folded into KPI condition.

ID	Component as voiced	Framework destination	Disposition	Notes
D1-30	Internal audit, staffed with data-management capability, checks how domains actually work	-	Not carried	Through interfaces, not internal audits of domains.
D1-31	Rules must be set hard before federating, otherwise it is a waste of time	Sec. 5.2 preconditions	Carried - direct	Preconditions-before-delegation is the section's premise.

D2 - central data office consultant (31 components)

ID	Component as voiced	Framework destination	Disposition	Notes
D2-1	Central office drafts data quality frameworks for domains; maintains contact with owners and stewards across them	Sec. 2 standard setting; stakeholder mandate	Carried - direct	The function pairing (set standards, then sustain the people who must apply them) .
D2-2	17 domains of which 6 prioritized and only 3 worked with daily	Sec. 1(iii) progressive instantiation; Sec. 5.5 asymmetric effort	Carried - generalised	Asynchrony of governance adoption.
D2-3	Assign ownership with business support; deliver data to the right person, for the necessary duration, GDPR-aligned	Sec. 2 compliance monitoring; Sec. 3.1 co-decided access	Carried - generalised	Access minimization specifics abstracted into compliance monitoring and adjacent co-decision on sensitive access.
D2-4	Governance rated 7/10: organizations 'can survive without', doing it intuitively	-	Context	Governance is important to scale organizations, not to run them.
D2-5	Consistency as the central value: one language, one approval workflow for the whole organization	Sec. 2 standard setting; Sec. 4 marketplace gates	Carried - direct	Uniform approval workflow.
D2-6	Data users identified as report builders plus the owners and stewards themselves	-	Not carried	Consumer/analyst role not carried. Not needed from the start, can be important as time goes on.
D2-7	Owners and stewards sit in domain teams; the central office finds and assigns them	Sec. 3.2 roles in the business; Sec. 2 capability transfer	Carried - direct	Role placement in the business with central recruitment is the framework's arrangement.
D2-8	Roles are part-time, squeezed into daily workload; only the employee domain has a full-time owner	Sec. 5.2 executive mandate (resources); Sec. 7 mandate failure context	Carried - generalised	Time-release as the real sponsorship test; framework demands budgeted resourcing rather than goodwill.
D2-9	'We are trying to convince people' as the core job; top-down entry preferred, bottom-up pain-solving entry when needed; local benefit framing beats company-level appeals	Sec. 2 stakeholder mandate maintenance	Carried - direct	Governance is a collective effort, from both top and bottom.
D2-10	Roughly half of domains push back on new policy; twice-weekly follow-ups; escalation via team leader to their managers	Sec. 4 escalation paths; Sec. 2 stakeholder mandate	Carried - generalised	Persistent follow-up cadence and managerial escalation generalized into accountability channels and the vertical path.
D2-11	Central office is structurally peer-level: 'we are never higher level than them', instructions without power	-	Carried - direct	Relates to mandate issues, concerns extra activities without power to back it up.

ID	Component as voiced	Framework destination	Disposition	Notes
D2-12	Conflict rule: accept business-content feedback (they are the data experts); defend central principles; escalate to managers if refused	Sec. 3.1 decision scope; Sec. 2 conflict arbitration	Carried - generalised	-
D2-13	Domains are reactive; they engage only when given 'homework' they do not understand	Sec. 5.5 asymmetric effort; Sec. 3.3 literacy rationale	Carried - generalised	Motivates capability transfer and the training/activity conditions.
D2-14	People should be made to learn data governance before working in any data field	Sec. 3.3 mandatory onboarding training condition	Carried - direct	Mandatory training as an autonomy condition.
D2-15	Ideally governance starts at company founding	-	Not carried	Out of scope: the framework addresses established organizations in transition, not greenfield design.
D2-16	The transition is ongoing and feels never-ending; only the employee domain is fully migrated	Sec. 5.1 phases (hybrid longest)	Carried - generalised	The framework's expectation that the hybrid phase is the longest reflects this realism.
D2-17	Onboarding chain: strategic plan, owner definition with business, data transfer to landing zone, 'pack the data into collections', owner/steward approvers, then serve users	Sec. 5.4 technical onboarding; Sec. 4 marketplace gates	Carried - direct	The technical-onboarding definition preserves the wording 'packaging into collections'; owner/steward approvers become the domain-owner gate.
D2-18	Priorities domains by business criticality: employee (privacy/GDPR) and finance (audits) first; owner attitude and motivation can postpone a domain	Sec. 5.3 sequencing criteria 1 and 3	Carried - direct	Regulatory criticality and owner readiness/willingness are two of the four sequencing criteria.
D2-19	Domains defined by a predecessor via a data inventory in Excel plus many conversations	Sec. 2 boundary maintenance	Partially carried	Unsure how the domains are established, currently have to deal with sometimes inconvenient structure.
D2-20	Structure imperfect but workable; recurring disputes over which domain an item belongs to	Sec. 2 boundary maintenance; conflict arbitration	Carried - direct	Overlap resolution is an explicit boundary-maintenance duty.
D2-21	Domain completeness criteria: all data in, subdomain allocation, CDEs recognized, technical-business mapping, weekly quality checks, yet 'never ready' in practice	Sec. 3.3 autonomy conditions; Sec. 5.4 success criteria	Carried - generalised	The condition set echoes these criteria; 'never ready' tempered into conditions-based recognition rather than completion.
D2-22	CDE work invalidated when data changes are notified late; a month of work redone	-	Not carried	Communication failure. Governance interfaces are used
D2-23	Migration is demand-driven: a report request triggers the work; proactive management is the unreachable ideal	Sec. 7 reactive governance	Carried - direct	The anti-pattern definition ('only acts when a consumer requests data') matches this.
D2-24	Self-description of the center: connector, not boss. Same way of working, connections, security, consistent approval	Sec. 2 coordination & connection	Carried - direct	The function's framing ('act as the connector') matches the interviewee's own word.
D2-25	First steps elsewhere: C-level commitment of effort, money and time before anything starts	Sec. 5.2 executive mandate	Carried - direct	Budgeted C-level accountability is precondition one.
D2-26	Manage expectations and secure explicit commitment 'in a very clear way' from the very beginning	Sec. 2 stakeholder mandate maintenance	Carried - direct	Expectation management is named inside the function.

ID	Component as voiced	Framework destination	Disposition	Notes
D2-27	Change-management support faded away for lack of added value; data-technical product managers kept instead	-	Not carried	Change management is outside of the scope of this research. How to properly manage an organization's change is a separate study.
D2-28	Technical data steward: 'never underestimate'; needs business-to-technical mapping skill; developer time borrowed; no budget for full-time	Sec. 3.2 technical data steward; Sec. 7 missing technical stewardship	Carried - direct	The role's 'most undersupplied... must be explicitly resourced'.
D2-29	All personas settled before starting a project: owner, steward, technical steward, central team	Sec. 3.3 condition 1; Sec. 5.3 governance-ahead	Carried - direct	All-roles-filled is the first autonomy condition.
D2-30	Monthly all-domain console was one-way presentation; replaced by bi-weekly/monthly per-domain sessions	Sec. 7 one-way communication + countermeasure	Carried - direct	The countermeasure text ('per-domain sessions replace all-domain console format').
D2-31	Too little staff cannot serve high number of domains, peer company has more staff for less domains; 'we are just too nice... not loud enough'	Sec. 7 mandate failure; Sec. 5.2 resourcing	Carried - direct	Capacity and assertiveness deficits are both constituents of the mandate-failure anti-pattern and the mandate precondition.

D3 - data governance lead, CDRO (30 components)

ID	Component as voiced	Framework destination	Disposition	Notes
D3-1	A predecessor drafted the governance policy and interviewed stakeholders to map domains before the interviewee arrived	Sec. 5 phased setup	Context	Case history; explains the maturity of the domain map.
D3-2	The role is activating the owner/steward network. 'not just putting it on paper and forgetting about them'	Sec. 2 capability transfer (verify sustained activity); Sec. 3.3 activity condition	Carried - direct	Sustained-activity verification is written into both the function and the conditions.
D3-3	Domains are not one-to-one with departments; deliberate incremental multi-domain onboarding	Sec. 1(iii) progressive instantiation	Carried - direct	Asynchrony across domains is the third implication of the organizing principle.
D3-4	Clear ownership for data products and domains with subdomain nuance; resolving confusion over who decides	Sec. 3.1 decision scope; Sec. 4 authority boundaries register	Carried - direct	The register exists to remove this ambiguity.
D3-5	Introducing governance is change management, even if not labelled as such	Sec. 2 stakeholder mandate maintenance	Carried - generalised	Absorbed into expectation management and persuasion rather than a separate change function.
D3-6	Ad hoc privacy screening of ideas and integrations; sensitivity classification	Sec. 3.1 co-decided with adjacent authorities; Sec. 2 compliance monitoring	Carried - direct	Sensitivity classification is listed among adjacent co-decisions.
D3-7	Embedding governance reviews into processes and the data lifecycle, including technical activities	Sec. 2 platform stewardship (policy enforceable through the platform)	Carried - generalised	Process-embedded review generalized into platform-enforced policy.

ID	Component as voiced	Framework destination	Disposition	Notes
D3-8	Selling points: better-recorded decisions, a clear go-to person, compliance help; 'what's in it for them' framing; solving problems that cost stakeholders time	Sec. 2 stakeholder mandate maintenance	Carried - direct	Persuasion is part of the central's tasks
D3-9	DAMA/DMBOK underemphasize the relationship and persuasion side of governance	Sec. 2 stakeholder mandate as a first-class function	Carried - generalised	Elevating mandate maintenance to a named function answers this critique.
D3-10	Break the practical leap into manageable chunks and steps	Sec. 1(iii) progressive instantiation	Carried - generalised	Incrementalism at the person level mirrors incrementalism at the domain level.
D3-11	'Onboarding' means two things: technical (platform integration feasibility) and governance (owners available, quality issues, sensitivity)	Sec. 5.4 disambiguating onboarding	Carried - direct	The section's premise; the two-process table matches this account.
D3-12	Mandatory onboarding training for data owners, minimum around three months	Sec. 5.4 governance onboarding; Sec. 3.3 training condition	Carried - direct	The three-month minimum.
D3-13	Governance onboarding counts as success only if owners stay active after the training; a deliberately high threshold	Sec. 3.3 activity-after-training condition; Sec. 7 onboarding conflation	Carried - direct	The condition the framework calls 'the one most frequently lost'.
D3-14	CDRO KPIs (product counts, value cases with quantified impact) are separated from governance success criteria	Sec. 5.4 distinct success criteria per process	Carried - generalised	The technical/governance criterion split preserves this separation.
D3-15	'What good looks like' is undefined; a repeated data-maturity assessment should baseline it	-	Not carried	No maturity-assessment instrument in the framework, for neither central, domain or data products.
D3-16	A standalone data governance role was secured inside the employee data domain	Sec. 2 capability transfer (embedded placement)	Carried - direct	Embedded domain placement is the function's core mechanism.
D3-17	Remit is platform data, but the lead is 'in demand' beyond it; a global project creates 'a bit of a function creep point'	Sec. 6 inward function creep	Carried - direct	The framework's function-creep terminology and countermeasures trace to this account.
D3-18	Advocating the same subdomain and strategic/operational model to other business areas so no divergent model emerges	Sec. 6 advocacy without ownership; Sec. 2 standard setting	Carried - direct	'Advocacy without ownership' is the named countermeasure.
D3-19	Strategic and operational data owner levels	Sec. 3.2 owner split (strategic/operational)	Carried - direct	The split is written into the owner role definition.
D3-20	The CDO supervises the team and reports progress to a SteerCo	Sec. 4 executive tier (Data Governance Board reporting to a SteerCo)	Carried - direct	SteerCo is a level up on the central data function.
D3-21	Consulted authorities: risk management, data privacy, legal, information management office, security, NITSO	Sec. 6 five adjacent categories; Sec. 5.2 adjacent alignment; Sec. 2 adjacent-authority coordination	Carried - direct	Authorities owning more power than the central data office on how to handle and/or use data.
D3-22	Coming from 'one compliance team with one authority mandate' to many teams; processes could be streamlined so requesters know the hoops	Sec. 6 rationale; Sec. 7 authority confusion	Carried - generalised	The register and decision-rights patterns answer the many-authorities confusion.

ID	Component as voiced	Framework destination	Disposition	Notes
D3-23	Risk management is the authoritative voice where guidance must be followed. But mitigation choices are left to the central team	Sec. 6 pattern: adjacent leads, central executes	Carried - direct	'Mitigation choices may be left to the central authority within constraints' mirrors this description.
D3-24	Marketplace approval has three gates (team, data owner, risk) as an initial safeguard because the function is new; explicitly not permanent; removal discussion pending	Sec. 4 marketplace gate design and removal pathways; Sec. 7 permanent transitional gate	Carried - direct	The removal-pathway requirement - and treating its absence as a design deficiency - generalizes this live case.
D3-25	Domains must stay fluid with organizational change: combine or divide domains while principles stay stable	Sec. 2 boundary maintenance	Carried - direct	Domains and IT move with the business.
D3-26	Prefer strategic-level definition of domains/subdomains with an upfront skills assessment (data analysts are natural stewards) over operational fact-finding	Sec. 7 inertia countermeasure (strategic-level domain definition)	Partially carried	Strategic-level definition is carried as a countermeasure; the skills-assessment instrument is not specified.
D3-27	Tiered approach: strategic level plus operational owners and stewards plus a robust network	Sec. 3.2 roles; Sec. 4 tiers	Carried - direct	The tiering is the framework's role and escalation structure.
D3-28	Delegates recruited through a workshop with the finance domain so leave or deadlines do not stall momentum	Sec. 3.2 delegates; Sec. 7 brittle role architecture	Carried - direct	'Recruited through a workshop process led by the central authority'; the anti-pattern names the brittleness this prevents.
D3-29	Open networking sessions to scout potential future members of the network	Sec. 4 pipeline-building channel; Sec. 2 recruit pipeline candidates	Carried - generalised	The tactic is generalized into a standing pipeline channel.
D3-30	Once technical onboarding starts, 'we want the governance to be already ahead'	Sec. 5.3 criterion 4 (governance-ahead-of-integration)	Carried - direct	Tech capabilities means nothing without the ability or knowledge to utilize it.

Disposition summary

Interviewee	Carried - direct	Carried - generalised	Partially carried	Not carried	Context	Total
D2	17	8	1	4	1	31
D1	14	7	4	3	3	31
D3	20	7	1	1	1	30
All	51	22	6	8	5	92

Roughly four of every five voiced components were carried in some form; the not-carried set is small but systematic (see Section 8).

Framework-element matrix: design antecedents per interview

Cells list the component IDs from Section 5 that constitute each element's identifiable design-phase antecedents. A dash means no antecedent in that interview. Elements resting on a single interview are flagged in the reading.

Framework element	D1	D2	D3	Reading
Sec. 1 Governed autonomy (i-iii)	D1-3, D1-16	D2-2	D3-3, D3-10	The principle's practical formulation is D1's maxim; its asynchrony clause reflects D2's lived reality and D3's deliberate incremental rollout.
Sec. 1(iv) Recursive autonomy	-	-	D3-21, D3-23	Shared decision rights with adjacent authorities trace to D3 alone.
Sec. 2 Standard setting	D1-6, D1-10	D2-1, D2-5	D3-18	D1 supplies the scope inventory and the machine-readable clause; D2 the one-language/one-workflow value.
Sec. 2 Boundary maintenance	D1-8	D2-19, D2-20	D3-25, D3-26	Consolidate/divide wording from D3; overlap disputes from D2; the definition method itself was not codified (see Sec. 8).
Sec. 2 Conflict arbitration	D1-2	D2-12	-	D2's accept-content/defend-principle rule and D1's two options for shared definitions.
Sec. 2 Compliance monitoring	D1-21, D1-29	D2-3	D3-6	KPI-based monitoring rather than ad hoc audits reflects D1's KPI practice.
Sec. 2 Platform & tooling stewardship	D1-7, D1-10	D2-17	D3-7	Enforceability-through-platform is D1; the pipeline vocabulary is D2.
Sec. 2 Coordination & connection	D1-7	D2-24	-	The function's 'connector' framing is D2's own word; cross-domain catalogue visibility is D1.
Sec. 2 Stakeholder mandate maintenance	D1-9, D1-13, D1-15	D2-9, D2-10, D2-25, D2-26	D3-5, D3-8, D3-9, D3-29	The most densely design-anchored function; all three interviews contribute (persuasion, incentives, pipeline).
Sec. 2 Capability transfer	D1-28	D2-7	D3-2, D3-12, D3-16	Placement duration from D1; training and activity verification from D3; recruitment-and-assignment from D2.
Sec. 2 Adjacent-authority coordination	-	-	D3-21	Entirely D3-sourced among these interviews.
Sec. 3.1 Decision scope	D1-12	D2-12	D3-4, D3-6	Delegated/reserved split from D2's conflict rule; granularity from D1; adjacent co-decisions from D3.
Sec. 3.2 Domain data owner (incl. split)	-	D2-7	D3-19	The strategic/operational split is D3's model.
Sec. 3.2 Business data steward	D1-5	D2-7	D3-2	Placement in the business; capability gap acknowledged.
Sec. 3.2 Technical data steward	-	D2-28	-	Single-source: D2's account is the plainest antecedent of the role's first-class, explicitly-resourced status.
Sec. 3.2 Delegates	-	-	D3-28	Single-source: D3's finance-domain delegates workshop.
Sec. 3.3 Autonomy conditions	D1-14, D1-29	D2-14, D2-21, D2-29	D3-12, D3-13	Training and role-completeness from D2; KPI and demonstrability from D1; activity-after-training from D3.
Sec. 4 Authority boundaries register	D1-12	-	D3-4	Granular accountability tracing plus decision-rights de-confusion.
Sec. 4 Escalation paths	D1-24	D2-10	D3-20	D1 supplies the three tiers nearly one-to-one (incl. 'Data Quality Board'); D3 supplies the SteerCo reporting line.

Framework element	D1	D2	D3	Reading
Sec. 4 Accountability channels	D1-14	D2-30	D3-29	Per-domain cadence is D2's console reform; KPI dashboards D1; pipeline channel D3.
Sec. 4 Coordination interfaces	D1-2, D1-22	-	-	Flow-based cross-domain working groups are D1's consumer-driven clustering, repurposed.
Sec. 4 Marketplace approval flows	D1-19	D2-5, D2-17	D3-24	Gate composition and criteria from D1/D2; the removal-pathway doctrine from D3's live three-gate case.
Sec. 5.1 Phases	D1-3	D2-16	D3-1	Hybrid-longest realism from D2.
Sec. 5.2 Preconditions	D1-18, D1-31	D2-25, D2-31	D3-21	Executive mandate (D2), platform/capability floor (D1), adjacent alignment (D3). One precondition per interview.
Sec. 5.3 Sequencing logic	D1-17, D1-27	D2-18	D3-30	Criteria 1 and 3 from D2, criteria 1 and 2 from D1, criterion 4 from D3. Fixed ordering later contested in validation.
Sec. 5.4 Onboarding disambiguation	-	D2-17	D3-11, D3-12, D3-13, D3-14	Substantially a codification of D3, with D2's pipeline wording in the technical half.
Sec. 5.5 Hybrid-state governance	D1-14	D2-2, D2-13	-	Asymmetric effort from D2; visible KPI tree and 'policy house' from D1.
Sec. 6 Adjacent authorities (patterns, creep)	-	-	D3-17, D3-21, D3-22, D3-23	Category list, adjacent-leads pattern, and the function-creep concept all trace to D3.

Anti-pattern seeding

Anti-pattern (Sec. 7)	Design-phase antecedent	Source
Excused absence	D1: 'data mesh is used as an excuse' by central teams to stop prescribing rules or getting involved	D1-20
Nominal federation	No clear antecedent in these three transcripts; plausibly authorial or literature-derived	-
Fragmentation	D1: federating without capability or platform maturity ('you're basically screwed'; empty Snowflake environment)	D1-18
Reactive governance	D2: migration and CDE work triggered by consumer requests rather than proactive identification	D2-23
One-way communication	D2: monthly all-domain console received nothing back; reformed into per-domain sessions	D2-30
Domain definition by inertia	D1: central teams follow the inherited business structure because redefining domains is political	D1-8
Missing technical stewardship	D2: the role everyone underestimates; borrowed developer time; no budget for a full-time steward	D2-28
Mandate failure	D2: structurally peer-level centre, instructions without power, 'too nice... not loud enough', 3 staff for 17 domains	D2-11, D2-31
Onboarding conflation	D3: technical onboarding is not governance onboarding; success only if owners stay active after training	D3-11, D3-13
Brittle role architecture	D3: delegates recruited via workshop so a single absence or deadline does not stall the domain	D3-28

Anti-pattern (Sec. 7)	Design-phase antecedent	Source
Authority confusion	D3: many compliance authorities, unclear hoops for requesters, remit boundaries needing constant clarification	D3-22
Permanent transitional gate	D3: the risk gate added 'as an initial safeguard', explicitly non-permanent, with the removal discussion still pending	D3-24
