

Cross-case validation matrix

Legend: C = confirms; R = refines; E = extends; X = challenges; Ctx = context only. Qualifiers: (n) = by negative case; (w) = weak; (i) = indirect (coded under a closely related code); (a) = aspirational; (d) = cross-case divergence. Numbers are segment references in that informant's coding report. A dash = not addressed. Combined tokens (e.g. C/R) reflect a segment carrying both valences.

Framework element	E1	E2	E3	E4	E5	E6	Cross-case reading
Section 1 - Organizing principle: governed autonomy							
1(i) Substantive domain authority	C(i) 5, 9	C 2, 4, 14, 21	R(i) 2	C+E 5	C 3, 14; R 7	-	Broadly confirmed; E5 bounds feasibility (full per-domain specialist capacity unrealistic). Mostly through Section 3.1 operationalization.
1(ii) Authoritative centre	C(n) 15	R 10, 21	-	R/X 9	-	C+E 22	Needed but contested in posture: E1 demands harder exercise of the mandate, E2 sequences persuasion before enforcement, E4 prefers negotiated RACI over mandating. Reconcilable as authoritative-on-process, collaborative-on-content (Contested point 5).
1(iii) Progressive instantiation	C/R 9	C 13	R 2	C 10	-	C+E 9	Well supported across five informants; E6 extends it to adaptive / MVP governance for growth-stage organizations.
1(iv) Recursive autonomy	C 7; R 20	-	-	-	-	-	Single-informant. Plausible but effectively untested across the panel.

Framework element	E1	E2	E3	E4	E5	E6	Cross-case reading
Section 2 - Central meta-governance functions							
2 Standard setting (CF-SS)	C 3; C(n) 15	C 3, 5	C 5	C 10	C 1, 2	C 2	Confirmed by all who addressed it. E4 adds standards-as-adaptable-templates; E1 shows that publishing the policy is the minimal exercise of mandate.
2 Boundary maintenance (CF-BM)	R 4; C 5, 29	C 5	E 9, 19	R 13	C 8	E 21	Confirmed, but the function lacks a decomposition method. E3 (object x organization x application matrix) and E4 (KPI / consumer anchoring) supply two candidate procedures. Scope refined to cross-domain boundaries; intra-domain restructuring monitored from within the domain (E1).
2 Conflict arbitration (CF-CA)	C 6	-	-	C 15	-	-	Confirmed where addressed; Centre endorsed as final arbiter with local resolution first.
2 Compliance monitoring (CF-CM)	C 7	C 4, 5	-	-	-	-	Confirmed where addressed; E1 clarifies the split: center owns the guideline layer, domains execute.
2 Platform & tooling (CF-PT)	C 8	-	C(i) 3	R 4; E 17	C 2	R 5; E 6, 20	Confirmed and strengthened. E6 argues machine-executable policy is a necessity at scale (not an option); E4 situates governance and semantics at the

[illegible]

Framework element	E1	E2	E3	E4	E5	E6	Cross-case reading
3.1 Decision scope (DS)	C 5	C 14; C/R 21	R 2; E 9	C/E 5; R 18	Ctx 17	-	Confirmed with two points: decision scope should follow the data object's layering (global vs local attributes, E3) and a producer-owns-semantics rule for shared entities (E4).
3.2 Domain data owner (RA-OWN)	C 21	C 16, 18	C 8; R 15	-	C 3; C/R 4	-	Confirmed, including the strategic / operational split (practiced at the case organization; E5's sponsor tier maps onto it). Owner decides; stewards implement (E2).
3.2 Business data steward (RA-BDS)	-	C 17	R 15	-	C 3	-	Confirmed where addressed; E5 suggests literacy growth may relax strict business / technical separation over time.
3.2 Technical data steward (RA-TDS)	C 22; R/X 23	C 15, 16, 17	R 16	-	C/R 4, 5, 15; R(d) 16	-	Necessity strongly confirmed, without it governance 'will just be in papers' (E2). Placement contested: central pool (E1) vs domain-embedded (E5). Terminology should anchor to DAMA custodian (E5, E3).
3.2 Delegates (RA-DEL)	-	-	-	-	-	-	Untested. No informant addressed trained backups; E3's sponsor-continuity point (s11) suggests extending the delegate logic upward instead.

Framework element	E1	E2	E3	E4	E5	E6	Cross-case reading
3.3 Autonomy conditions (AC)	C(n) 13, 25; C/E 24; X 18	C 18; R 19; E 20	-	C 15	C/R 15	-	Conditions endorsed; the strongest evidence is negative (absent KPIs and lineage disable autonomy). Refinements: partial autonomy is a literacy gap (E2), CDE lists are dynamic and need revalidation (E2), pre/post literacy measurement (E1).
Section 4 - Governance interfaces							
4 Authority boundaries (GI-AB)	C(n) 27; C/R 29	-	C 4; E 20	C/R 8	-	-	Confirmed; E4 specifies the production method (negotiated, activity-level RACI workshops facilitated by the center). Undocumented boundaries generate the observed disputes (E1's SuccessFactors scoping case).
4 Escalation paths (GI-EP)	C 6; E 28	R/E 22; C 23; X 24	C 8	C 15, 19	C/E 6	C/E 23	Best-covered interface. E5 independently reproduces the three-tier structure with cadences and reporting granularity. E1 and E2 independently propose a horizontal peer-resolution stage before vertical escalation. E2 challenges executive-tier accountability in practice.
4 Accountability channels (GI-AC)	C(n) 13; E 14	C 7; E/R 8	R 7	R 16; E 21	C/E 6	C/E 23	Confirmed. Refinements: specify senders and receivers (E3), hybrid per-domain plus collective

Framework element	E1	E2	E3	E4	E5	E6	Cross-case reading
							forum (E2), RACI formalization (E4), and the center's own visible accountability (E6).
4 Coordination interfaces (GI-CI)	E 28	E/R 8; C 23	-	C 19	X 13	C/R 24	Endorsed in principle, challenged in feasibility: E5 reports structural cross-domain groups rarely materialize; the tactical tier is the de facto venue. Deliberate design needed; E6 adds producer-consumer joint representation.
4 Marketplace approval flows (GI-MA)	C/R 9	-	-	C 7, 15	C(a) 14	C/R 24	Shared target picture across four informants. E1 validates maturity-based gate migration per domain; E5 explicitly marks the marketplace aspirational under current capability.
Section 5 - Transition architecture							
5.1 Transition phases (TA-PH)	C 2; X 18	C 12, 13, 25	-	-	-	C/E 4; E 13; R/X 14	Phases confirmed; two challenges: attainability of the federated steady state is disputed (E1 never observed vs E2 prior organization attained), and E6 adds fragmented starting configurations the phase model does not cover.

Framework element	E1	E2	E3	E4	E5	E6	Cross-case reading
5.2 Preconditions (TA-PC)	C 2, 12; C(n) 25; C/R 32	X 24	C 5, 10; C(n) 14	C 3	C(i) 11	R 5; C/R 12; E 10	Well supported. Refinements: positive business case (E6), policy-as-code capability (E6). Challenged by E2's approver-only CDO; E1 flags conceptual overlap with the Section 3.3 conditions.
5.3 Sequencing logic (TA-SEQ)	Ctx 31	C(w) 26	C 12	E(i) 12	C 8, 9	X/R 15	Most contested element. Criterion 1 is supported with a concrete mechanism, but directly challenged by E6 (dual pilot: quick win plus high-value domain, effort-vs-value matrix). Criteria 2-4 essentially untested.
5.4 Onboarding disambiguation (TA-ONB)	C 16	-	-	-	-	-	Single-source: a live instance of onboarding conflation at the case organization (training equated with onboarding).
5.5 Hybrid-state governance (TA-HYB)	C/R 9; C(n) 13; C/E 26	-	-	E(i) 21	-	E 13; C 16; C/E 23	Asymmetric central effort is the strongest-corroborated sub-element (E1 and E6 near-verbatim). Reversibility endorsed with a KPI-triggered re-entry and non-puitive framing (E1); E6 adds program continuity and the center's own accountability.

Section 6 - Adjacent authorities

Framework element	E1	E2	E3	E4	E5	E6	Cross-case reading
6 Decision-rights patterns (AA-PAT)	-	-	-	-	C 12	C+E 18	The alignment-first posture is confirmed by the two informants who addressed it; the three named decision-rights patterns themselves went untested. E6 challenges the long-run framing: convergence pressure toward a unified governance authority; role stacking makes separate adjacent models unsustainable.
Section 7 - Anti-patterns							
7 Mandate failure (AP-MF)	C 12, 13, 15	C(i) 24	-	-	-	C 22	Most strongly instantiated anti-pattern. E1 and E2 observe the same organization (two vantages on one case); E6 generalizes the pattern and names its structural cause (low hierarchical positioning) from cross-client practice.
7 Missing tech. stewardship (AP-MTS)	C 22	C 15	-	-	C 15	-	Confirmed by three informants: the role's absence at the case organization (E1), its consequence - paper governance (E2), and business stewards' inability to script (E5).
7 Other anti-patterns (RG / OWC / DDI)	C 5 (DDI)	R 8 (OWC)	E(i) 9 (DDI)	C 2, 6 (RG); R 13 (DDI)	-	C 3 (OWC)	Selectively instantiated: reactive governance as the prevailing failure mode (E4); coherence-only central posture reads as one-way policy broadcasting (E6);

Framework element	E1	E2	E3	E4	E5	E6	Cross-case reading
							concept-based domains surviving reorganization supports the domain-definition-by-inertia countermeasure (E1), while E4 retains the org chart as a starting heuristic corrected by KPI ownership.
7 Anti-patterns overall (AP-GEN)	C 30	-	C 18	C 22	-	-	High face validity - E1 recognized every item and intends practical reuse - but the item-by-item review occurred with one informant only; other endorsements are global.
